## **InstaSnake PA200 Series Press Release**

**PRO-AUDIO SUB SNAKE FROM ETS USES LOW COST, EASY TO FIND, LIGHT WEIGHT, CAT5 or BETTER CABLE TO SEND AUDIO OVER FOUR CHANNELS, UP TO 1,000 FEET.**

Fremont, CA – Introducing a new product from Energy Transformation Systems, Inc. (ETS), the **InstaSnake** (PA200 Series), which consists of two small boxes (5.5 x 2.5 x 1.5 inches) with four XLR microphone inputs plus a shielded RJ45 jack on one box and corresponding outputs on the other. Available in metal or plastic, there is also an optional unit with (4) 1.5 foot microphone pigtailed on the receiving end.

If you are involved in Pro-Audio, it is not hard to think of 101 ways to use this versatile unit... live sound, recording, broadcasting, production, for emergencies, or in the event your regular snake fails. This small unit is easy to handle, sets up and breaks down in no time and takes very little room to store.

The **InstaSnake** is a passive unit, so you do not need power. The **InstaSnake** accepts 'mike' line level, analog or digital audio and supports phantom power.

In-house testing using a Low Z Shure microphone, Cat5 proved distances of 1900 feet with no diminution in the quality of sound. Using Shielded Cat5 phantom power was achieved for distances of 850 feet, again with no diminution in quality.

What does this prove? You can get 4 channels of analog or digital audio signal on ONE run of Cat5 or better cable. UTP cable is inexpensive, easy to find and light weight for handling.
